A NEW AND SUPERIOR
LAMP,
FOR BURNING LARD.

The Patent Adjustable Lard Lamp.

This Lamp makes a very economical light, cheaper than Oil or Fluid, is easily adjusted and kept in burning order and will afford more light than any other now in use for the same consumption of burning material. One half pound of Lard will last Sixteen Hours, and give throughout that time a very brilliant light, with no other care than now and then turning the wrench so as force the Lard up against the wick.

☞The proprietors of this Lamp received a Diploma at the last State Fair, and the Lamp itself has given universal satisfaction whenever used.

Directions for Using the Lamp.

Take a piece of coarse open Cotton Flannel or Drilling the width of the iron slide, put it in double, then unscrew the packing and with a knife fill the cylinder with cold Lard, then adjust the packing on the spiral screw and with the thumb wrench, screw the packing down until the lard comes up to the wick. When a new wick is put in the lamp apply a little lard on the top of the wick before lighting, that the blaze may have some lard to feed upon until the heat melts the lard in the tube.

In cold weather, before extinguishing the light, press the lard up to the wick, then it will be ready for use when wanting.

MANUFACTURED and for sale WHOLESALE and RETAIL by the subscribers, sole Proprietors for the N. E. STATES.
